

INTERNATIONAL DEVELOPED EQUITY ALLOCATION

OVERVIEW

The GMO International Developed Equity Allocation Strategy seeks to generate total return greater than that of the MSCI EAFE Index.

The philosophy that underlies all of GMO's Asset Allocation investment strategies is the belief that, at times and in the short term, the pricing of asset classes can deviate from true intrinsic value but mean reverts to appropriate valuation levels over a complete market cycle. Using GMO's 7-Year Asset Class Forecasts, the Strategy seeks to allocate to areas of the global equity markets we believe are most attractively valued. Our approach combines the best of GMO's top-down Asset Allocation views and bottom-up equity research to identify mispricings at both the asset class and individual security levels. The Strategy allocates to equity strategies that are actively managed by other GMO investment teams with expertise and experience in security selection within their respective markets. The Strategy is allowed to invest up to 10% (at time of purchase) in emerging market equities.

The MSCI EAFE (Europe, Australasia, and Far East) Index (MSCI Standard Index Series, net of withholding tax) is an independently maintained and widely published index comprised of international large and mid capitalization stocks. The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
