MAJOR PERFORMANCE DRIVERS

Global equity markets enjoyed an excellent third quarter as Joe Biden dropped out of the presidential race, but Kamala Harris picked up the baton in a relatively seamless way. The Fed finally obliged with a 50 bp rate reduction in September, though it was accompanied by a warning that it would continue to be cautious in its approach. Markets seem unconcerned by the escalating situation in the Middle East even as it seems to be hurtling toward all-out conflict in the region.

Within the MSCI World ex USA universe, Value outperformed, and our performance was broadly in line with the Value index. In this environment, the stocks we identified as being most expensive fared very badly, but this was offset by the very cheapest names not keeping up with their slightly less cheap "shallow Value" counterparts.

From a country perspective, allocation had a marginal positive impact and security selection had a marginal negative impact. Good selection in the U.K., helped by not holding the two oil majors, and Japan was offset by negative selection in Italy and Germany, both hindered by overweight positions in Automobiles.

From a sector perspective, allocation was negative due to an overweight in Consumer Discretionary, which actually posted a modest negative return for the quarter, and an essentially zero weight in Utilities, which performed strongly. This was offset by good stock selection within sectors, driven by outperformance in Financials, which has a particularly powerful impact as it accounts for almost one-third of the total portfolio.

Composite Inception Date: 31-May-23

Risks: Risks associated with investing in the Strategy may include: (1) Market Risk - Equities: The market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (2) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. (3) Non-U.S. Investment Risk: The market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. For a more complete discussion of these risks and others, please consult the Fund's offering documents. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information. **Performance Returns:** Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®). A Global Investment Performance Standards (GIPS®) Composite Report is available on GMO.com by clicking the GIPS® Composite Report link in the documents section of the strategy page. QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO International Opportunistic Value Strategy seeks to generate total return by investing primarily in international equities. The Strategy measures its performance against the MSCI World ex-U.S.A. Value Index.

The Strategy aims to profit from our Asset Allocation team's top-down insights as to the most attractively valued segment of developed markets outside the U.S. Currently, the team finds developed, non-U.S. "deep value" (cheapest 20%) stocks to be unusually cheap relative to their own history. This actively managed Strategy concentrates exposure in the deep value segment by focusing on the international stocks that GMO's Systematic Equity team identifies as the most undervalued, using proprietary valuation models because we believe that relying on reported financials and index definitions of value may lead investors to misjudge the opportunity.

IMPORTANT INFORMATION

Comparator Index(es): The International Opportunistic Value Blended Benchmark+ is an internally maintained index computed by GMO, comprised of (i) MSCI World ex USA through 06/28/2024 and (ii) MSCI World ex USA Value thereafter. The MSCI World ex USA Value Index (MSCI Standard Index Series, net of withholding tax) is an independently maintained and widely published index comprised of global developed markets, excluding the United States. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.

ABOUT GMO
