MAJOR PERFORMANCE DRIVERS

The Markit iBoxx USD Liquid High Yield index returned 0.2% in Q4, led by the lowest quality CCC bonds which outperformed both on a total return and excess return (over government bonds) basis.

The High Yield portfolio had a negative return for Q4. The portfolio's allocation to Quality, through BB bonds, was the main detractor to performance. The allocation to Total Return Swaps referencing the benchmark index also lagged, as its discount to NAV increased through the quarter. The Carry factor, implemented through long positions in CDX HY, outperformed the benchmark handily, offsetting part of the performance dent from the other factor sleeves. At quarter end, the portfolio was invested in liquid portfolio products and high yield bonds.

Composite Inception Date: 31-Jan-17

Risks: Risks associated with investing in the Strategy may include: (1) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. (2) Market Risk - Fixed Income Investments: The market price of a fixed income investment can decline due to a number of market-related factors, including rising interest rates and widening credit spreads or decreased liquidity stemming from the market's uncertainty about the value of a fixed income investment (or class of fixed income investments). (3) Credit Risk: The risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligation to pay principal and interest or otherwise to honor its obligations in a timely manner. For a more complete discussion of these risks and others, please consult the Fund's offering documents. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information. **Performance Returns:** Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®). Actual fees are disclosed in Part 2 of GMO's Form ADV and are also available in each strategy's Composite Report.**

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO High Yield Strategy seeks to generate total return in excess of that of its benchmark, the Markit iBoxx USD Liquid High Yield Index, by applying a systematic, factor-based approach to portfolio construction. It is designed to capture alpha from top-down sources of risk premia, taking advantage of structural market inefficiencies, while maintaining a liquid portfolio. Our top-down, data-driven approach (in what is still largely a fundamentally managed asset class) brings a unique perspective that allows us to allocate capital across a range of high yield instruments in an effort to achieve optimal risk-adjusted returns in excess of the Strategy's benchmark.

IMPORTANT INFORMATION

Benchmark(s): The Markit iBoxx USD Liquid High Yield Index is an independently maintained index consisting of liquid USD high yield bonds, selected to provide a balanced representation of the broad USD high yield corporate bond universe.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.

ABOUT GMO
