Value Add vs. MSCI EAFE	+1.71	+2.58	+1.33	+2.29	+1.95	-0.45	+1.65

MAJOR PERFORMANCE DRIVERS

– The overweight exposure to Emerging Market equities has been reduced to zero over the course of 2024 and the portfolio is now aligned with the benchmark from a top-down regional perspective, investing solely in Developed ex-U.S. equities. The strategy does have a notable overweight to Japan, however, and this had a small negative impact for the quarter as MSCI Japan lagged MSCI EAFE.

– Security selection was strong as both the dedicated Japan position and the broader Developed ex-U.S. exposure outperformed their respective benchmarks.

Developed ex-U.S. equities, including the dedicated Japan Value position, accounted for all the equity exposure of the portfolio for the quarter, and so had no impact on relative performance versus the MSCI EAFE benchmark. Security selection was strong for the quarter and the portfolio outperformed the MSCI EAFE index return of 7.3%. Underweight positions in Novo Nordisk (Denmark Health Care), ASML (Netherlands Information Technology), and Toyota (Japan Consumer Discretionary), along with an overweight position in Sumitomo Forestry (Japan Consumer Discretionary) and Sekisui House (Japan Consumer Discretionary) featured in the top five biggest individual contributors at the total portfolio level. On the flipside, overweight positions in STMicroelectronics (France Information Technology), Stellantis (Italy Consumer Discretionary), Equinor (Norway Energy), Logitech (Switzerland Information Technology), and TotalEnergies (France Energy) featured in the top five biggest detractors.

Portfolio weights, as a percent of equity, for the positions mentioned were: Toyota (0.0%), Sekisui House (1.2%), TotalEnergies (2.7%), Stellantis (0.9%), ASML (0.2%), Sumitomo Forestry (1.2%), STMicroelectronics (1.2%), Novo Nordisk (0.2%), Equinor (1.6%), Logitech (1.4%).

Composite Inception Date: 30-Nov-91

Risks: Risks associated with investing in the Strategy may include: (1) Market Risk - Equities: The market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (2) Non-U.S. Investment Risk: The market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. (3) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. For a more complete discussion of these risks and others, please consult the Fund's offering documents. This is not a complete list of risks associated with investing in the Strategy. Please contact GMO for more information. **Performance Returns:** Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not predictive of future performance.** Net returns are presented after the deduction of a model advisory fee and incentive fee if applicable. These returns include transaction costs, commissions and withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. Fees paid by accounts within the composite may be higher or lower than the model fees used. Gross returns are presented gross of management fees and any incentive fees if applicable. These returns include transaction costs, commissions, withholding taxes on foreign income and capital gains and include the reinvestment of dividends and other income, as applicable. If management and incentive fees were deducted performance would be lower. For example, if, before fees, the strategy were to achieve a 10% annual rate of return above its hurdle rate each year for ten years, and an annual advisory fee of 1% and incentive fee of 20% of net returns above the hurdle rate were charged during that period, the resulting average annual net return (after the deduction of management and incentive fees) would be approximately 7.20%. **GMO LLC claims compliance with the Global Investment Performance Standards (GIPS®). QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO International Developed Equity Allocation Strategy seeks to generate total return greater than that of the MSCI EAFE Index.

The philosophy that underlies all of GMO's Asset Allocation investment strategies is the belief that, at times and in the short term, the pricing of asset classes can deviate from true intrinsic value but mean reverts to appropriate valuation levels over a complete market cycle. Using GMO's 7-Year Asset Class Forecasts, the Strategy seeks to allocate to areas of the global equity markets we believe are most attractively valued. Our approach combines the best of GMO's top-down Asset Allocation views and bottom-up equity research to identify mispricings at both the asset class and individual security levels. The Strategy allocates to equity strategies that are actively managed by other GMO investment teams with expertise and experience in security selection within their respective markets. The Strategy is allowed to invest up to 10% (at time of purchase) in emerging market equities.

IMPORTANT INFORMATION

Benchmark(s): The MSCI EAFE ++ Index is an internally maintained benchmark computed by GMO, comprised of (i) GMO blended benchmark of International Developed Equity Allocation Composite through 06/30/2014 and (ii) MSCI EAFE (Europe, Australasia, and Far East) Index (MSCI Standard Index Series, net of withholding tax) thereafter. The GMO blended benchmark of International Developed Equity Allocation Composite is comprised of a weighted average of account benchmarks; many of the account benchmarks consist of MSCI EAFE (Europe, Australasia, and Far East) (MSCI Standard Index Series, net of withholding tax) or some like proxy for each market exposure they have. For each underlying account benchmark, the weighting of each market index will vary slightly. The index is internally blended by GMO and maintained on a monthly basis. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder. The MSCI EAFE (Europe, Australasia, and Far East) Index (MSCI Standard Index Series, net of withholding tax) is an independently maintained and widely published index comprised of international large and mid capitalization stocks. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

The above information is based on a representative account in the Strategy selected because it has the fewest restrictions and best represents the implementation of the Strategy.
