Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein. To obtain performance information to the most recent month-end, visit www.gmo.com.** The portfolio is not managed relative to a benchmark. References to an index are for informational purposes only. The performance information for all periods prior to May 15, 2023, was achieved prior to the change in the Fund's investment objective and principal investment strategies. In addition, the Fund's benchmark has changed from MSCI EAFE Index to MSCI World ex-USA.

MAJOR PERFORMANCE DRIVERS

Global equity markets enjoyed an excellent third quarter as Joe Biden dropped out of the presidential race, but Kamala Harris picked up the baton in a relatively seamless way. The Fed finally obliged with a 50 bp rate reduction in September, though it was accompanied by a warning that it would continue to be cautious in its approach. Markets seem unconcerned by the escalating situation in the Middle East even as it seems to be hurtling toward all-out conflict in the region.

Within the MSCI World ex USA universe, Value outperformed, and our performance was broadly in line with the Value index. In this environment, the stocks we identified as being most expensive fared very badly, but this was offset by the very cheapest names not keeping up with their slightly less cheap "shallow Value" counterparts.

From a country perspective, allocation had a marginal positive impact and security selection had a marginal negative impact. Good selection in the U.K., helped by not holding the two oil majors, and Japan was offset by negative selection in Italy and Germany, both hindered by overweight positions in Automobiles.

From a sector perspective, allocation was negative due to an overweight in Consumer Discretionary, which actually posted a modest negative return for the quarter, and an essentially zero weight in Utilities, which performed strongly. This was offset by good stock selection within sectors, driven by outperformance in Financials, which has a particularly powerful impact as it accounts for almost one-third of the total portfolio.

Inception Date: 29-Jul-98

Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis.

Risks: Risks associated with investing in the Fund may include: (1) Market Risk - Equities: The market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (2) Non-U.S. Investment Risk: The market prices of many non-U.S. securities (particularly of companies tied economically to emerging countries) fluctuate more than those of U.S. securities. Many non-U.S. markets (particularly emerging markets) are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than it is in U.S. markets. (3) Management and Operational Risk: The risk that GMO's investment techniques will fail to produce desired results, including annualized returns and annualized volatility. For a more complete discussion of these risks and others, please consult the Fund's Prospectus. **Performance Returns:** Annualized Returns may include the impact of purchase premiums and redemption fees. The GMO Trust funds are distributed in the United States by Funds Distributor LLC. GMO and Funds Distributor LLC are not affiliated.

Net Expense Ratio: 0.68%; Gross Expense Ratio: 0.80% Net Expense Ratio reflects the reduction of expenses from fee reimbursements. The fee reimbursements will continue until at least June 30, 2025. Elimination of this reimbursement will result in higher fees and lower performance. Gross Expense Ratio is equal to the Funds Total Annual Operating Expenses set forth in the Funds most recent prospectus dated June 30, 2024.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO International Opportunistic Value Fund seeks to generate total return by investing primarily in international equities. The Fund measures its performance against the MSCI World ex-U.S.A. Value Index.

The Fund aims to profit from our Asset Allocation team's top-down insights as to the most attractively valued segment of developed markets outside the U.S. Currently, the team finds developed, non-U.S. "deep value" (cheapest 20%) stocks to be unusually cheap relative to their own history. This actively managed Fund concentrates exposure in the deep value segment by focusing on the international stocks that GMO's Systematic Equity team identifies as the most undervalued, using proprietary valuation models because we believe that relying on reported financials and index definitions of value may lead investors to misjudge the opportunity.

IMPORTANT INFORMATION

Comparator Index(es): The MSCI World ex USA Value Index (MSCI Standard Index Series, net of withholding tax) is an independently maintained and widely published index comprised of global developed markets, excluding the United States.
