MAJOR PERFORMANCE DRIVERS

The third quarter brought some long-awaited changes in central bank policies, though not all in the same direction. The U.S. cut interest rates, while Japan raised them. These decisions had significant effects on their respective markets as Japan experienced heightened volatility, and U.S. equity markets surged to all-time highs. Additionally, the U.S. dollar declined due to the lower rates, and gold continued its upward trajectory, reaching new highs. The Hang Seng Index also saw a strong rally as the Chinese government announced new economic stimulus measures.

The portfolio had a flat quarter, with commodities being the major detractor while equities added value. Within commodities, our general underweight to the asset class led to losses. Within equities, long positions in the Hang Seng were the key contributor.

(2) Market Risk - Equities: The market price of equities may decline due to factors affecting the issuer, its industries, or the economy and equity markets generally. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares. (3) Currency Risk: Fluctuations in exchange rates can adversely affect the market value of the Fund's non-U.S. currency holdings and investments denominated in non-U.S. currencies. For a more complete discussion of these risks and others, please consult the Fund's Prospectus. For a more complete discussion of these risks and others, please consult the Fund's Prospectus. **Performance Returns:** Performance for the year of inception is less than a full calendar year. Returns shown for periods greater than one year are on an annualized basis. To obtain performance information to the most recent month-end, visit www.gmo.com. **Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein.** Net of all fees and expenses after reimbursement by the Manager, but not transaction costs, if any. If certain expenses were not reimbursed, performance would be lower. Gross of fees, expenses and transaction costs, if any. If these fees, expenses and costs were included, performance would be lower.

QUARTERLY INVESTMENT REVIEW

PRODUCT OVERVIEW

The GMO SGM Major Markets Investment Fund's investment objective is long-term total return. The Fund takes both long and short positions in a range of global equity, bond, currency, commodity markets, and over-the-counter (OTC) markets using exchange-traded OTC futures and forward foreign exchange contracts, as well as by making other investments.

The Systematic Global Macro team's investment process systematically applies value and sentiment strategies across global markets. We believe that markets are inefficient but, in the long term, that economic reality will prevail and markets will revert toward fair value; however, the timing of this is uncertain. We aim to profit from mean reversion by buying markets that we believe are depressed in price and shorting markets that we believe are trading at inflated values. To deal with the uncertainty of timing, we model investor sentiment.
