

BENCHMARK-FREE ALLOCATION

OVERVIEW

The GMO Benchmark-Free Allocation Strategy seeks to generate positive total return by allocating dynamically across asset classes, free from the constraints of traditional benchmarks.

The philosophy that underlies all of GMO's Asset Allocation investment strategies is the belief that, at times and in the short term, the pricing of asset classes can deviate from true intrinsic value, but mean reverts to appropriate valuation levels over the long term. GMO's proprietary 7-Year Asset Class Forecasts form the foundation of our investment process, providing a framework to assess the return opportunity embedded in different asset classes. We use that insight to allocate to what we believe are the most attractively priced asset classes.
